🌐 Module 03: Open Source Intelligence (OSINT) and Attack Surface Mapping

```
# Exercise 2: Collecting OSINT about Target on the Web
```

Scenario

This lab focuses on collecting OSINT about the target organization from publicly accessible web sources. It helps penetration testers to gather specific information regarding the target.

Objective

The objective of this lab is to help students learn different techniques to gather information about a target on the web:
- Search for Target's Information using Advanced Search Operators
- Search for Public Cloud Buckets, blobs, files, and spaces using **https://buckets.grayhatwarfare.com**

Task 1: Searching for Target's Information using Advanced Search Operators

Overview of the Lab

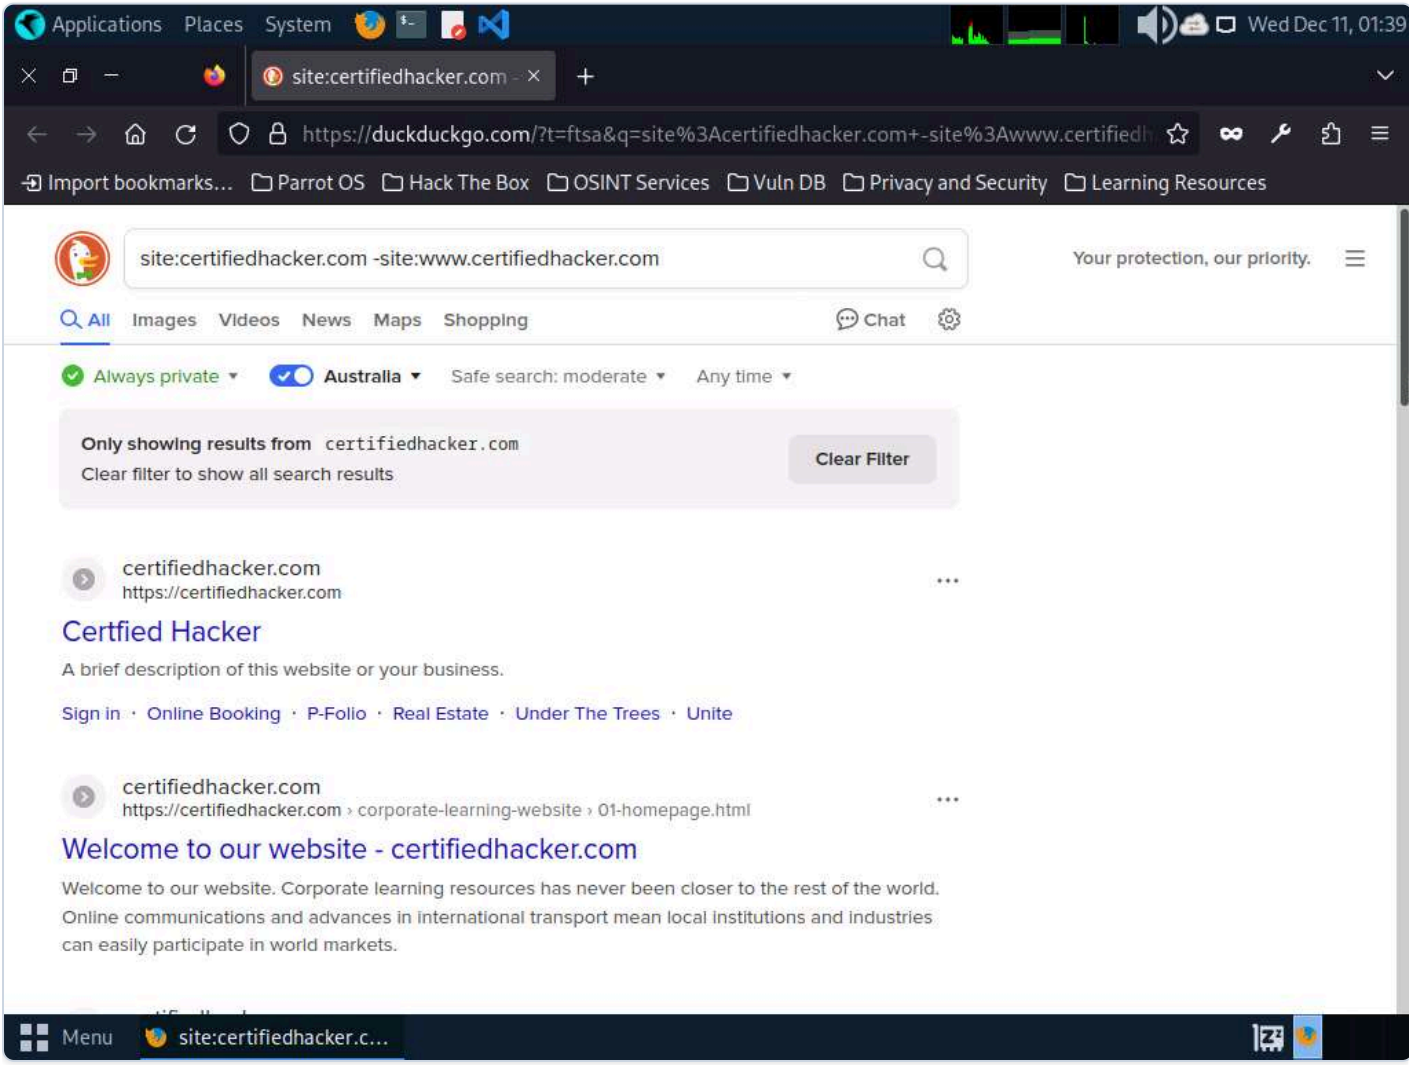

In this lab, we will use Google's advanced operators and Google Hacking Database (GHDB) to refine web searches with the Google search engine and create complex queries to find a comprehensive resource for querying the extensive reach of the Google search engine.

The following table lists the search operators that work with each Google search service:

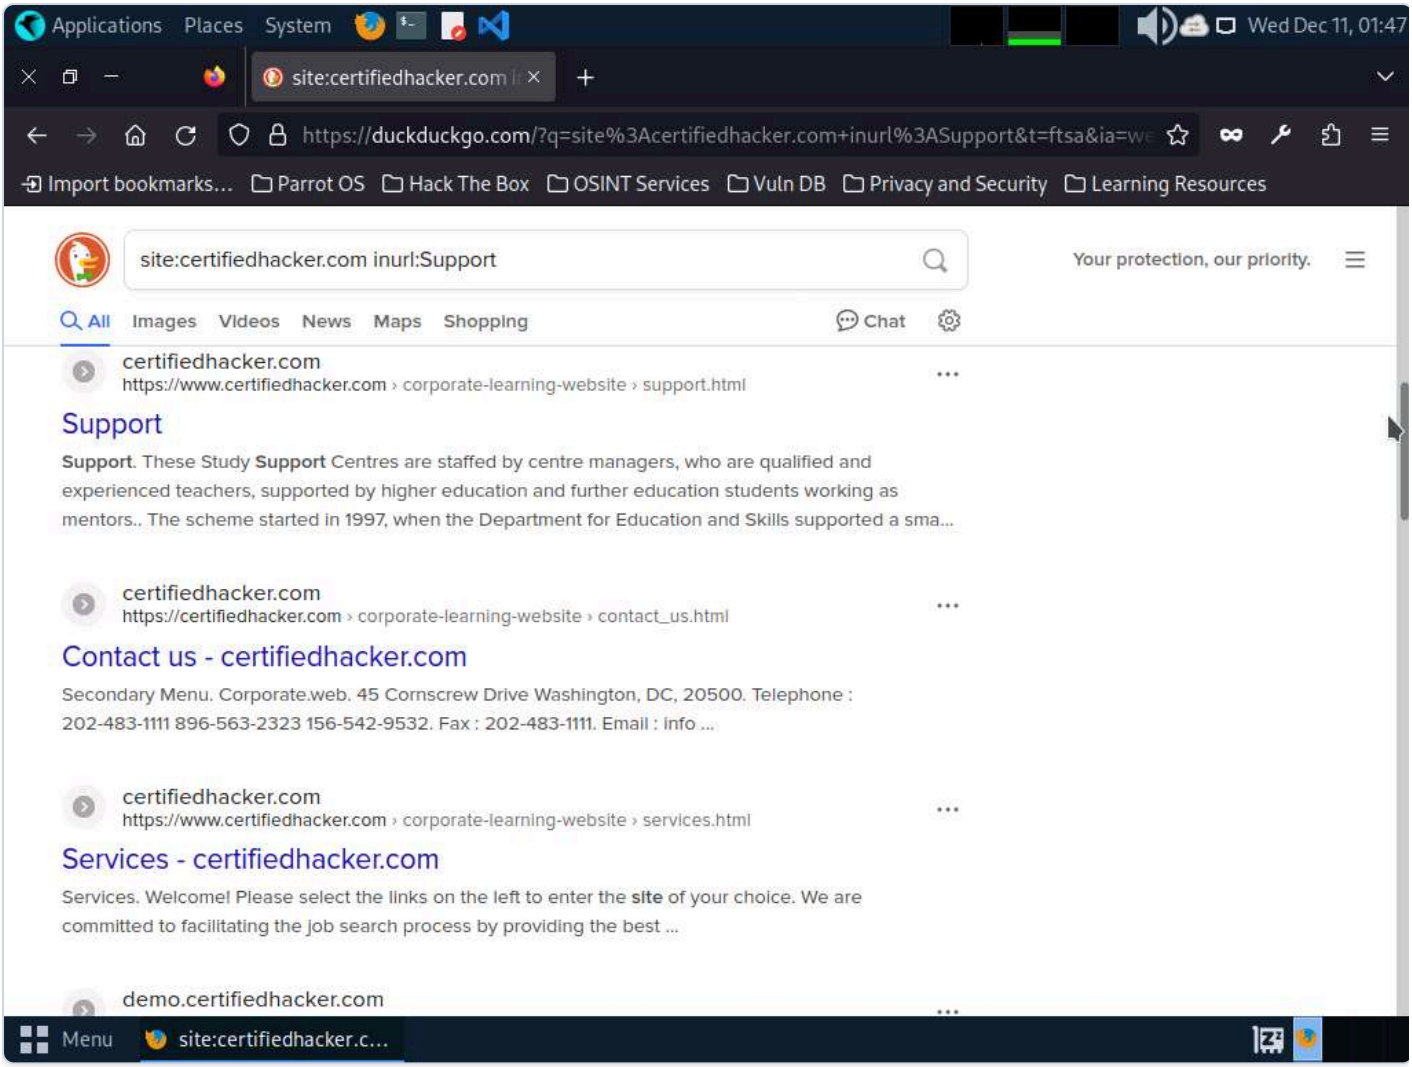

Search Service	Search Operators
Web Search	`allinanchor:`, `allintext:`, `allintitle:`, `allinurl:`, `cache:`, `define:`, `filetype:`, `id:`, `inanchor:`, `info:`, `intext:`, `intitle:`, `inurl:`, `link:`, `related:`, `site:`
Image Search	`allintitle:`, `allinurl:`, `filetype:`, `inurl:`, `intitle:`, `site:`
Groups Search	`allintext:`, `allintitle:`, `author:`, `group:`, `insubject:`, `intext:`, `intitle:`
Directory Search	`allintext:`, `allintitle:`, `allinurl:`, `ext:`, `filetype:`, `intext:`, `intitle:`, `inurl:`
News Search	`allintext:`, `allintitle:`, `allinurl:`, `intext:`, `intitle:`, `inurl:`, `location:`, `source:`
Product Search	`allintext:`, `allintitle:`

Lab Tasks

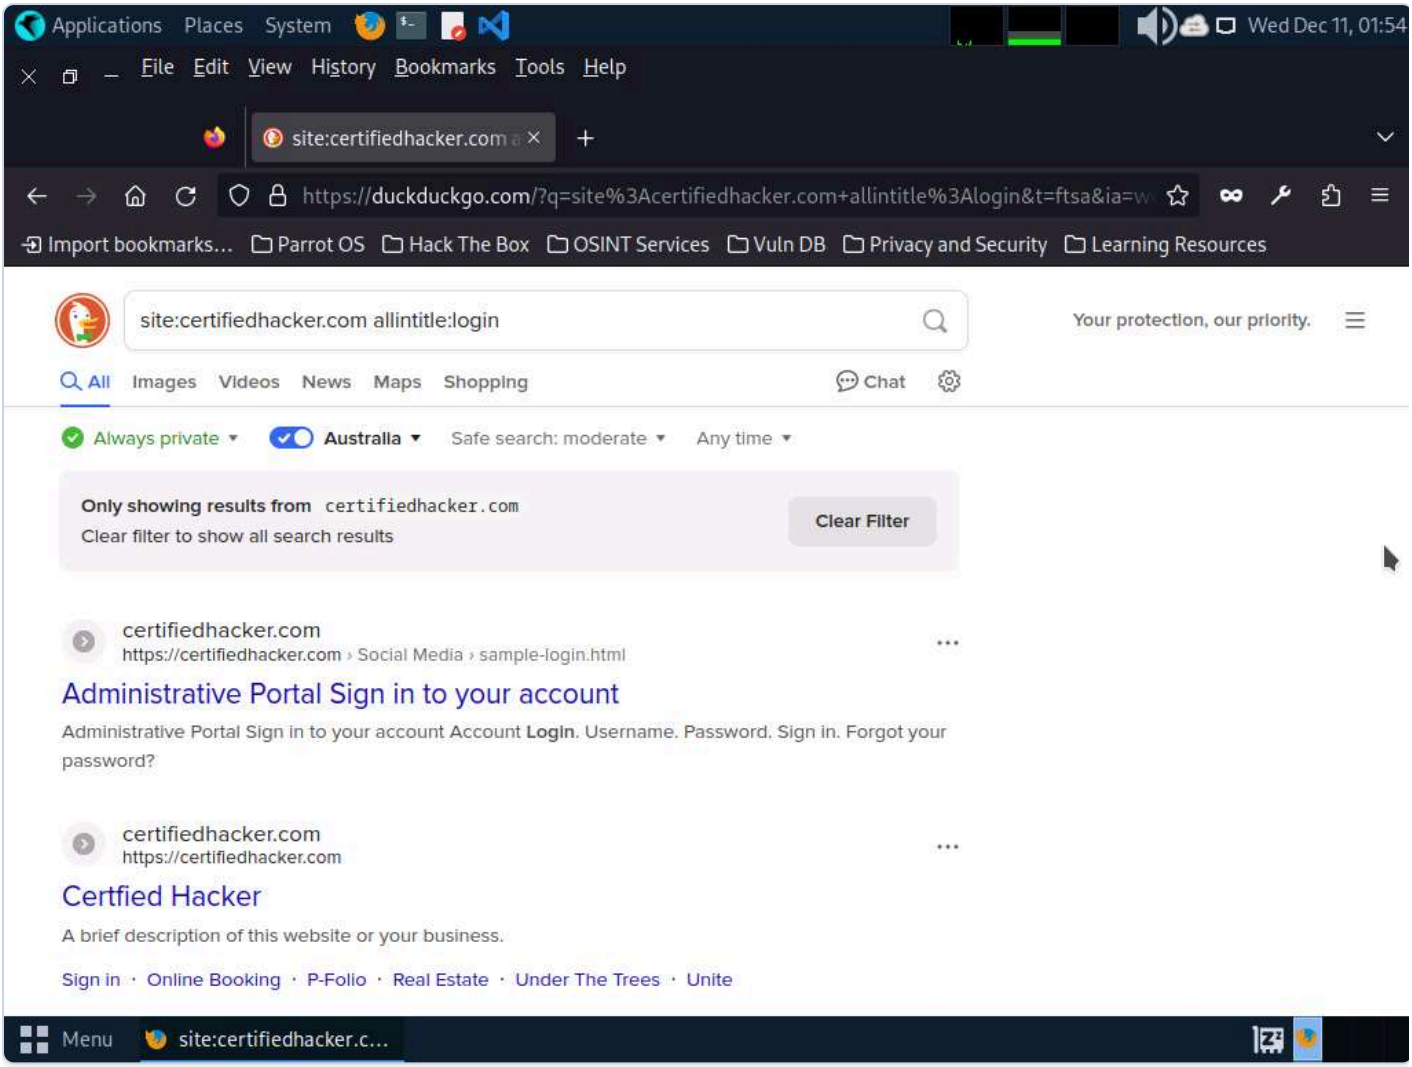

1. Open a web browser and in the address bar type **site:certifiedhacker.com -site:www.certifiedhacker.com** and press Enter to find all the pages related to the subdomains of **certifiedhacker.com**.

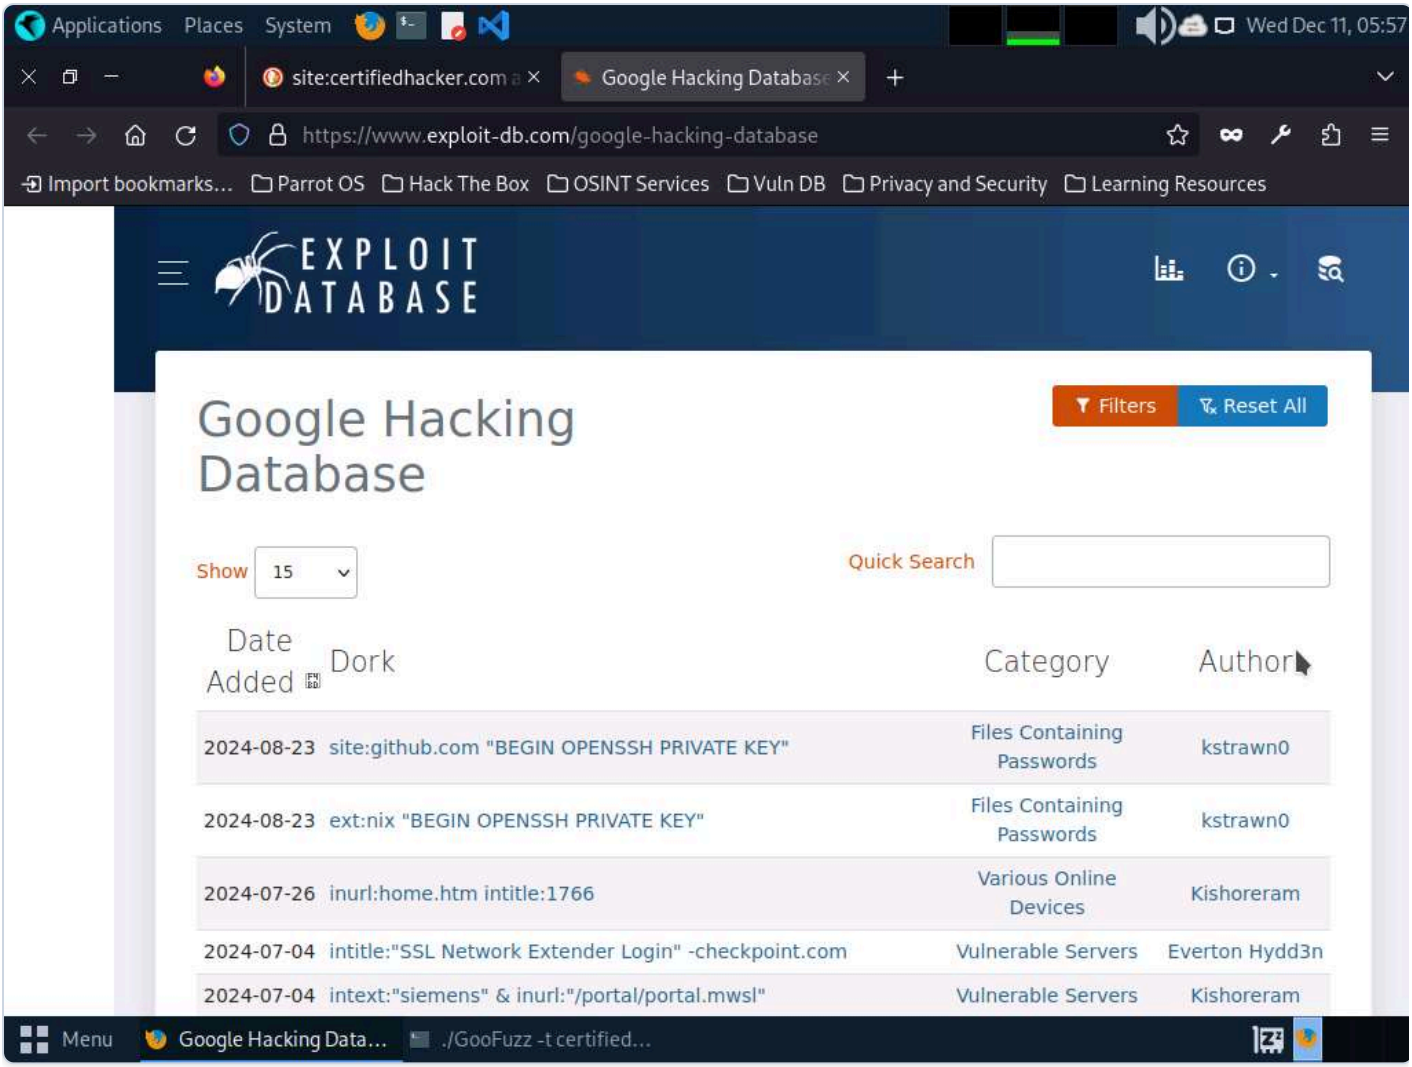

1. Now, in the address bar type **site:certifiedhacker.com inurl:Support** to retrieve all the web pages containing "support" in the URL of the pages in the domain specified by the site operator.
2. *(The output might differ when you perform this lab.)*

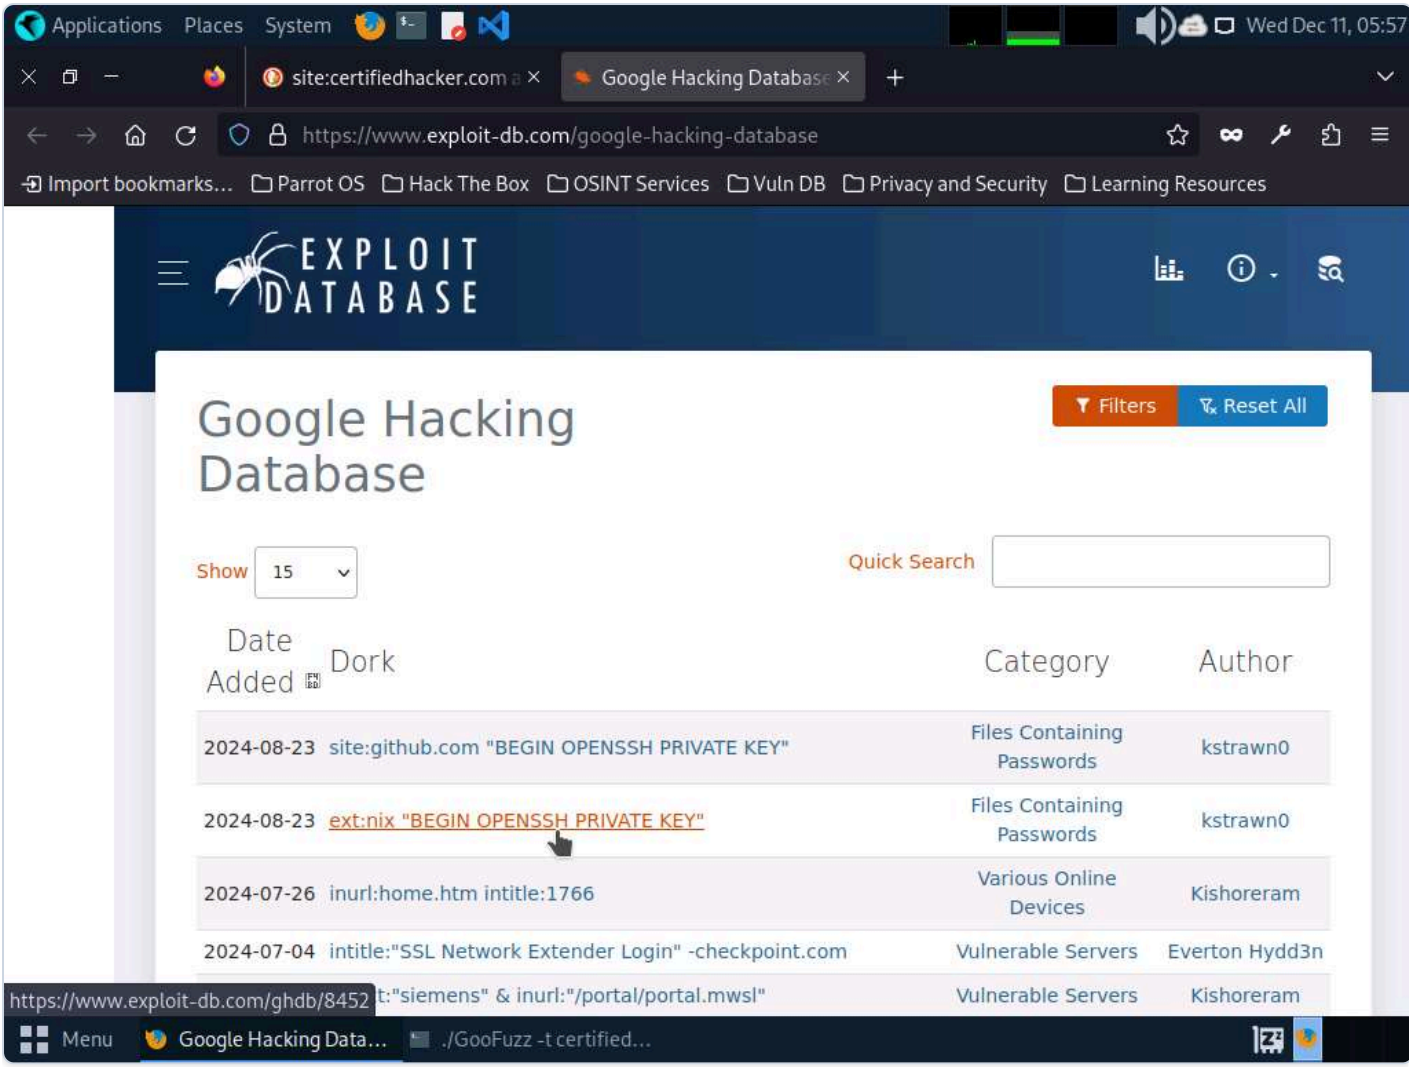

1. In the address bar type **site:certifiedhacker.com allintitle:login** to retrieve all the webpages pages containing login in the title.

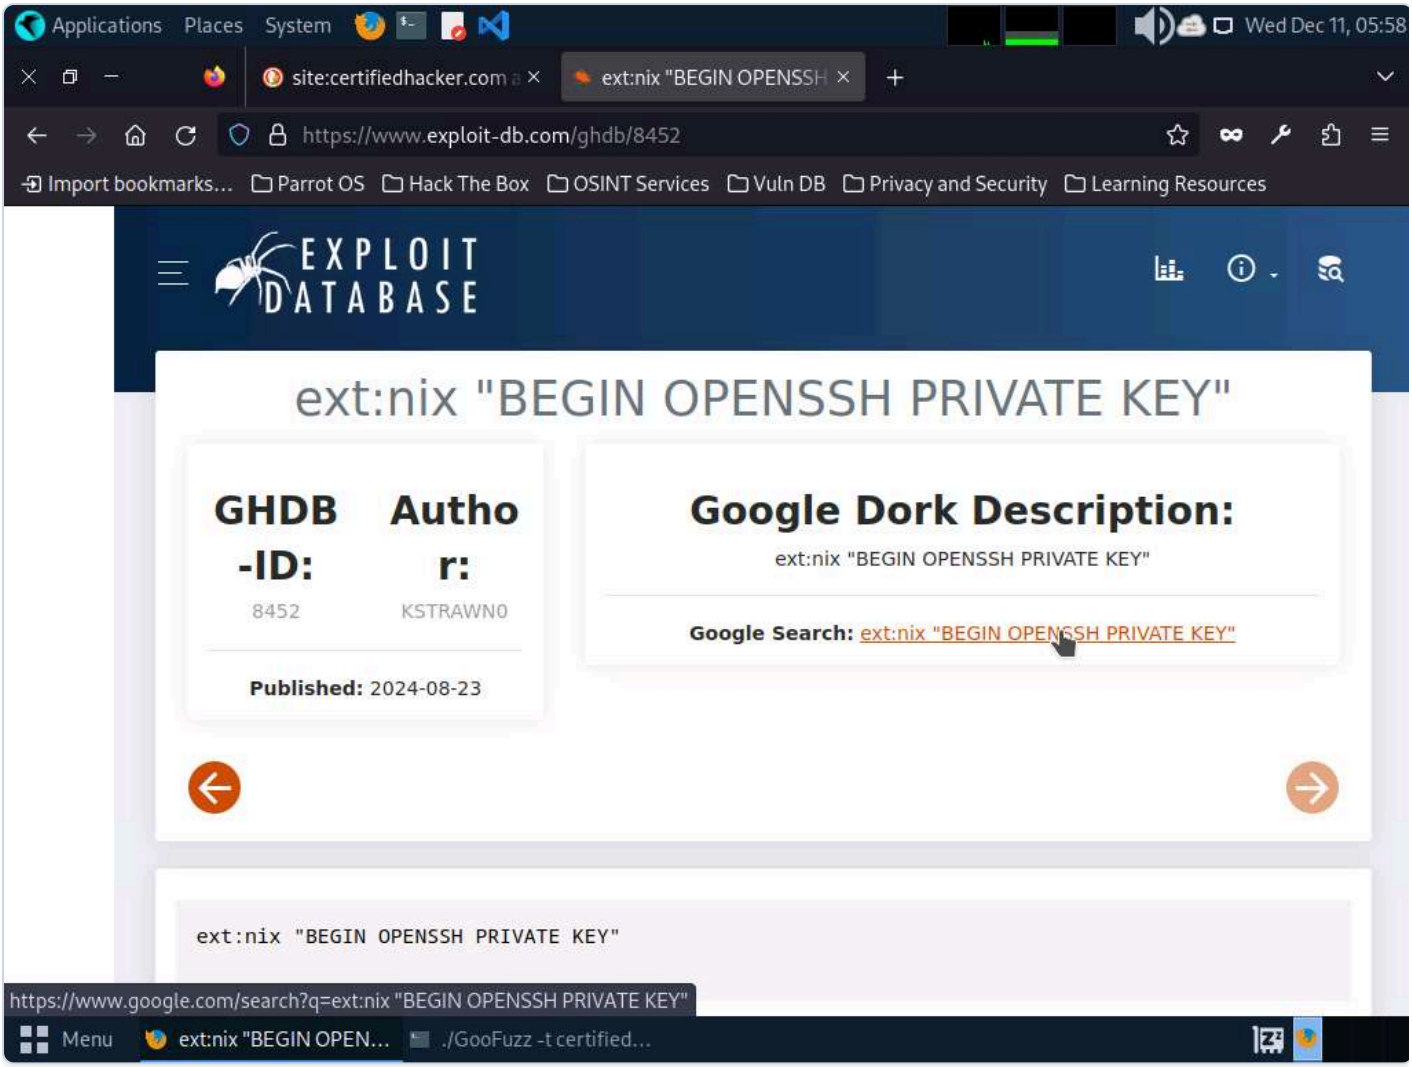

1. Now, we will use dorks available in the Google Hacking Database (GHDB) to perform advanced searches. Open a new tab and in the address bar type **https://www.exploit-db.com/google-hacking-database** and press Enter to navigate to Google Hacking Database website.
2. In the Google Hacking Data Base you can see various Google dorks that can be used for advanced search.

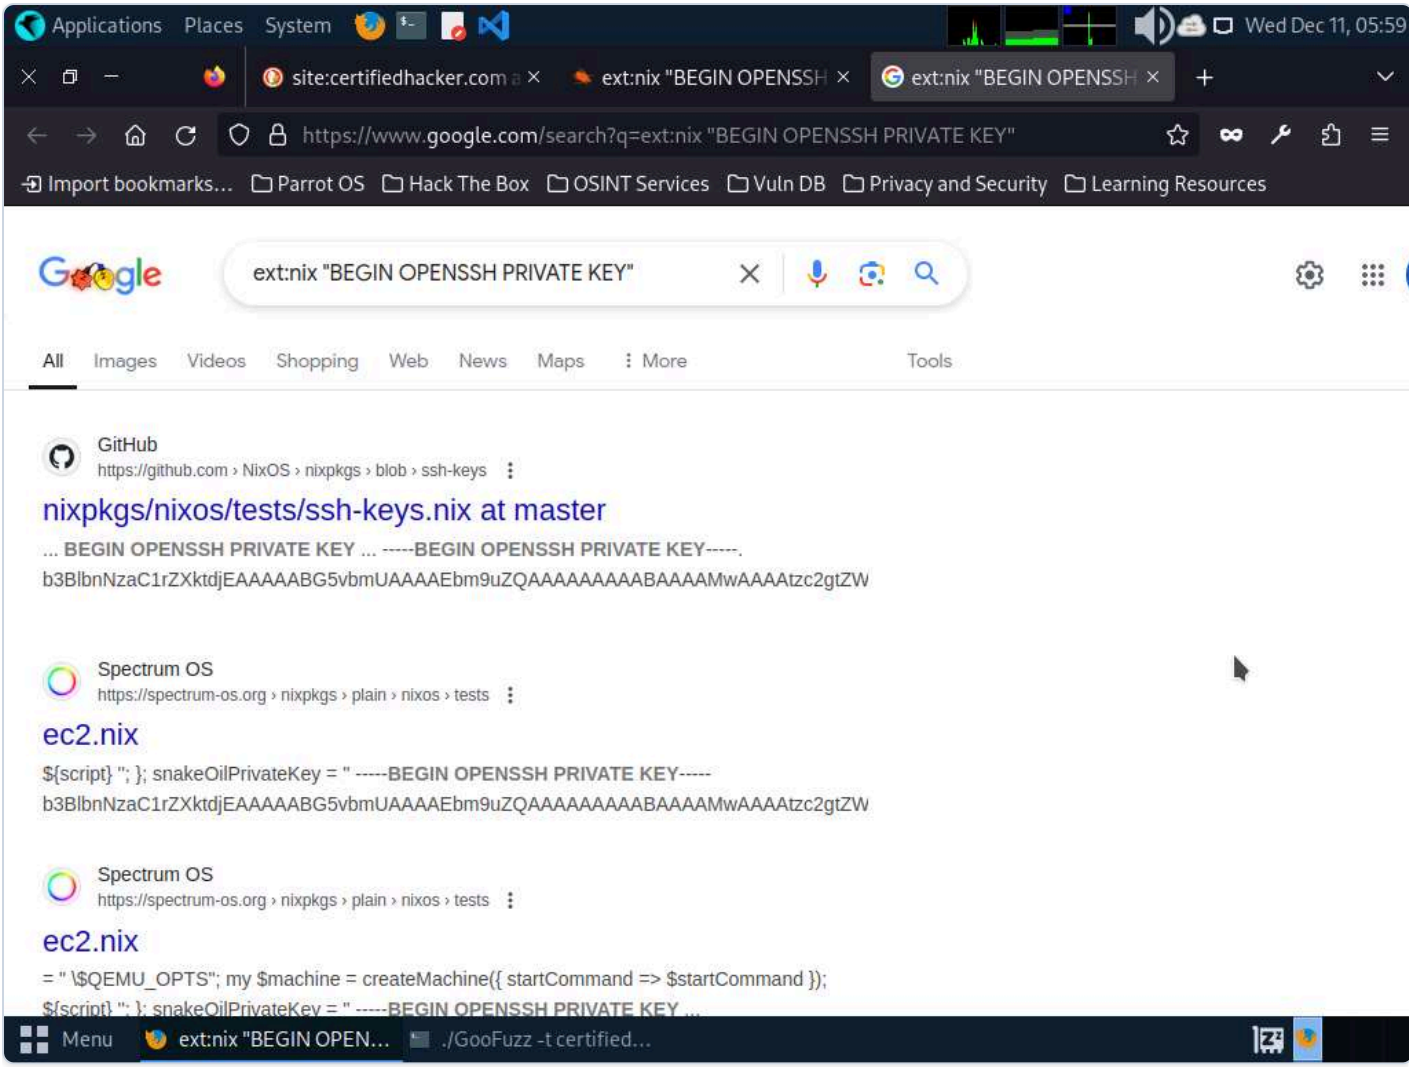

1. You can click on any Dork to view its details.

1. Click on the Google Search hyperlink to perform a search using the Google dork.

This concludes the demonstration of performing web searches using advanced operators. Close all open windows.

IMPORTANT: ❓ **Question 3.2.1.1** On Parrot Security machine, utilize Google's advanced search operators and the Google Hacking Database (GHDB) to refine web searches and construct complex queries using the Google search engine. In GHDB, search for **inurl:home.htm intitle:1766** and record the GHDB-ID of the corresponding Google dork. [!SUCCESS] ✅ **Answer:** **8450**

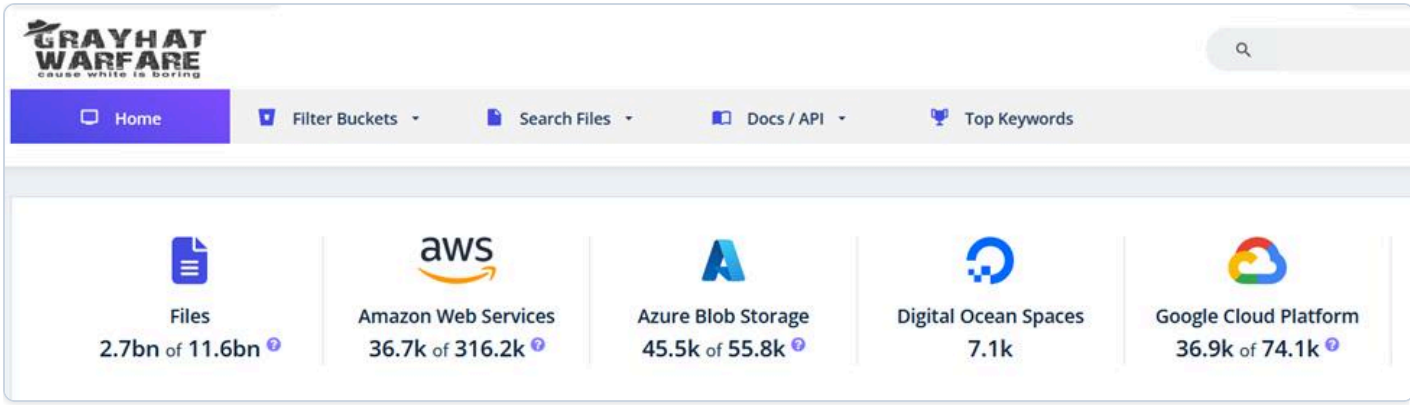

Task 2: Searching for Public Cloud Buckets, Blobs, Files, and Spaces using https://buckets.grayhatwarfare.com

We know there are many organizations that are using the cloud, so if we want to extract some information from there it is good to have an understanding of it. We can use the web for assistance.

Lab Tasks

1. Enter the following URL:
2. **https://buckets.grayhatwarfare.com/**

An example of the website is in the screenshot:

Take a few minutes and explore the site, you will see for virtually all of the cloud services we have to be concerned with what we can access from this tool. Click on the AWS and you will see a listing of the buckets and the ability to filter on your query as well. But, you would have to register for this ability, and this is something you might want to do if you are required to do lots of searches for data.
